DID YOU KNOW... 
HEMOPHILIA CARRIERS CAN HAVE BLEEDING SYMPTOMS AS WELL?

Hemophilia carriers do have increased bleeding scores compared to controls. Heavy menstrual bleeding is the most common form.
DID YOU KNOW hemophilia carriers can have bleeding symptoms as well?
Hemophilia carriers do have increased bleeding scores compared to controls. Heavy menstral bleeding is the most common form.

DID YOU KNOW musculoskeletal bleeding and structural joint damage can occur with hemophilia carriers?
As many as 14–19% of hemophilia A carriers have reported hemarthrosis (bleeding into joint spaces).

DID YOU KNOW many women with bleeding disorders are unaware of their status?
Many carriers are not aware that their symptoms are abnormal and do not seek medical advice.

DID YOU KNOW carriers with low clotting factor levels should be categorized as having hemophilia? The expected mean clotting factor level in carriers of hemophilia is 50% of the levels found in the healthy population. Carriers with low clotting factor levels should be categorized as having hemophilia of appropriate severity and should be managed accordingly.

DID YOU KNOW hemophilia can appear in families who have no history of bleeding disorders? Sometimes hemophilia can occur when there is no family history of it. This is called sporadic hemophilia and is caused by a change in the person's own genes.

MUSCULOSKELETAL BLEEDING AND STRUCTURAL JOINT DAMAGE CAN OCCUR WITH HEMOPHILIA CARRIERS?
As many as 14–19% of hemophilia A carriers have reported hemarthrosis (bleeding into joint spaces).
DID YOU KNOW...

MANY WOMEN WITH BLEEDING DISORDERS ARE UNAWARE OF THEIR STATUS?

Many carriers are not aware that their symptoms are abnormal and do not seek medical advice.
